U.S. Fresh Orange Exports Forecast to Increase Slightly in MY 2000/01

Source: U.S. Department of Commerce, Bureau of the Census

U.S. orange exports in 2000/01 are forecast to reach 525,000 metric tons, 2 percent more than shipments last season. A larger orange crop and likely strong demand in leading markets is expected to improve U.S. orange export expectations in 2000/01. Also, the reduction in exports from some key Mediterranean citrus producing countries should lead to improved opportunities for U.S. orange sales this season. Asian countries will continue to boost U.S. export performance this season. Moreover, U.S. orange shipments this season should benefit from a larger Korean quota. Traditionally, markets in Asia account for more than 60 percent of total U.S. annual orange shipments. Japan, Hong Kong, and Korea, in that order, lead U.S. orange sales to Asia. U.S. orange exports in 1999/2000 totaled 516,288 tons, valued at \$287 million. Exports to Canada, the United States top single market, reached 163,660, valued \$74 million.

Export Summary

U.S. exports of horticultural products to all countries in November totaled \$1 billion, an increase of 6 percent from the same month a year earlier. Categories with the most significant increases in November were fresh fruit (up 27 percent to \$198 million) and tree nuts (up 10 percent to \$137 million). The categories with the most significant decreases were wine and beer (down 15 percent to \$57 million) and fruit/vegetable juices (down 18 percent to \$49 million).

Exports to Malaysia were up 64 percent to \$14 million, while exports to Hong Kong rose 54 percent, to \$60 million. Exports to the EU were down 10 percent to \$271 million while exports to Japan dropped 5 percent to \$137 million. Other countries with major growth were: Venezuela, up 29 percent; Taiwan, up 20 percent; Singapore, up 18 percent; and Mexico, up 15 percent.

To access **FAS Attache Reports** online, please reference the following Internet address:

<http://www.fas.usda.gov/scriptsw/attacherep/default.asp>

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries. Search by keyword, including country and commodity.

What's New on the Homepage?

The Horticultural & Tropical Products Division has introduced an enhanced feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site will contain information on policy and technical developments affecting trade in horticultural commodities, as well as selected reports submitted by FAS overseas offices and special reports prepared by the division. The information will typically remain on the site for approximately one month, before being archived. For further information on this new feature, please contact Nancy Hirschhorn (202) 720-2974. Go to <http://www.fas.usda.gov/http/> and click on "What's New?"

World Fresh Citrus Situation

Total Northern Hemisphere citrus production in 2000/2001 is forecast at 45.9 million tons, decreasing 10 percent from 1999/2000, based mainly on reductions in the crops in the Mediterranean Basin, China, Japan and the United States. Total fresh citrus exports in 2000/2001 from the Northern Hemisphere are forecast at 6.4 million tons, down 12 percent from the 1999/2000 level. The reduction in exports from some key citrus producing countries should lead to improved opportunities for U.S. citrus exports.

Northern Hemisphere

United States

Total citrus production in the United States in 2000/01 is forecast at 15.3 million tons, down 3 percent from the previous year's harvest, based on January 10, 2001, estimates. This forecast does not reflect any effects of the freezing temperatures that occurred in parts of Florida the last few days in December and the first week in January. Total orange production in 2000/01 is forecast to rebound to 11.5 million tons, down nearly 4 percent from last year's good output. Low droppage rates and smaller fruit size are contributing to the lower forecast. Grapefruit production in 2000/01 is forecast at 2.4 million tons, down 4 percent from last year's output.

Total U.S. citrus exports in 2000/01 are forecast at 1.1 million tons, 4 percent higher than the previous year's shipments. Orange exports in 2000/01 are forecast to reach 525,000 tons, 2 percent more than last year. U.S. grapefruit exports in 2000/01 are forecast to increase to about 410,000 tons.

Consumption of fresh oranges is estimated to increase slightly in 2000/01.

Israel

Israel's citrus production during 2000/01 is forecast at 805,000 tons, slightly above the 1999/2000 level. Orange production is forecast at 300,000 tons; tangerine production at 140,000 tons; grapefruit production at 330,000 tons; and lemon production at 20,000 tons.

Mexico

Mexico's citrus production is forecast at 4.6 million tons in 2000/01, about 3 percent below last year's output. Overall citrus production for 2000/01 is forecast to grow because of timely rainfall and better weather than during the drier 1999/2000 season. Orange trees had good first and second blooms, but the third and fourth blooms are expected to be lower, so supplies of oranges at the end

of April 2001 could be low. Grapefruit, Persian and Key Lime production are forecast to increase due to prevailing good weather.

Exports of oranges in 2000/01 are forecast at 9,000 tons, down sharply from the 50,000 tons exported in 1998/99, which resulted from higher U.S. demand because of the California freeze. The United States is traditionally the largest export market for Mexico's oranges, which mostly originate in Sonora.

Spain

Spain's total citrus crop for 2000/01 is forecast at 4.9 million tons, down 15 percent from the previous year. The decrease is the result of inadequate water supplies, normal fluctuation of the production cycle, disease, irregular blooming and small sizes. Orange, tangerine, and lemon production are forecast to decrease by 10, 25, and 10 percent, respectively. Orange production during 2000/01 is forecast at 2.5 million tons, down from 2.8 million tons for the previous year.

Spain is the world's largest citrus exporter, accounting for nearly 45 percent of total Northern Hemisphere exports. Spain's citrus exports in 2000/01 are forecast at 2.8 million tons, down 19 percent from 1999/2000 because of the reduced supplies of oranges, tangerines, and lemons. The bulk of these exports go to traditional European markets such as Germany, France, the Netherlands, and the United Kingdom.

Morocco

Morocco's citrus production in 2000/01 is forecast at 1.1 million tons, down 21 percent from the previous year. A 42-percent drop in tangerine production and a 9-percent decline in orange production is accounting for the decline. Morocco experienced a drought that resulted in a significant shortage of irrigation water.

Citrus exports in 2000/01 are forecast at 497,000 tons, 100,000 tons below the previous year's shipments. Almost all of the decline is attributed to a forecast drop in tangerine exports to 176,000 tons, from 271,000 tons in 1999/2000.

Turkey

Turkey's citrus production in 2000/01 is forecast to decline by 13 percent. Favorable weather this year and improved tree maintenance and cultivation techniques have helped to increase production of oranges, lemons, and grapefruit. Turkey's citrus exports are forecast to increase to 555,000 tons, up 22 percent from the previous year.

Korea

Korea's tangerine production (unshu orange) during 2000/01 is forecast at 565,000 tons, down nearly 12 percent from the good crop of 1999/2000. This is the off year of the cyclical production pattern. However, the fruit is expected to be sweeter and of a higher quality than the previous year.

During calendar year 2001, Korea's import quota for fresh oranges is 40,046 tons, up from 35,596 tons in calendar year 2000. The in-quota tariff remains at 50 percent, while the out-of-quota tariff is 64.7 percent, down from 69.6 percent in calendar year 2000. According to sources, calendar year 2000 marked the first year out-of-quota imports exceeded quota imports since the market's liberalization.

Japan

Japan's total citrus production in 2000/01 is forecast at 1.5 million tons, down 18 percent from the 1999/2000 level. Tangerine production in 2000/01 is forecast to account for 93 percent of total production and accounts for the drop. As a result of the decrease in citrus production, Japan's total citrus imports in 2000/01 are forecast to increase to 513,000 tons, up slightly from the previous year's level. Orange imports are forecast at 140,000 tons. This level of fresh orange imports in 2000/01 represents an increase of 7 percent from the previous year. Grapefruit imports are forecast at 275,000 tons, about the same level as 1999/2000. Imports of fresh lemons in 2000/01 are projected at 90,000 tons.

China

China's citrus production for 2000/01 is forecast to decrease by 17 percent because of adverse weather and the alternating production year cycle. Orange production during 2000/01 is forecast at 2.9 million tons, down from 3.2 million tons in 1999/2000. Tangerine production is forecast at 5.1 million tons, down 21 percent from the previous year. Approximately 80 percent of China's citrus is harvested during the months of November and December. Much of China's citrus is reported to be of good quality at harvest time, but quickly deteriorates due to excessive handling during distribution and sales. Post-harvest practices of washing, waxing, and packing tend to be rare.

China's processing industry uses between 5 and 10 percent of the citrus crop each year, but this crop year the percentage might be lower than usual because of the production decrease and corresponding rise in prices. Canned fruit is the main processed citrus product and Mandarin oranges are the variety of choice for most canners. China's citrus exports exceed its imports, but exports are mostly comprised of fresh tangerines and canned citrus. When these 2 products are not considered, China's imports are greater. The United States is China's main source of imported oranges. Unlike in years past, China's official imports are higher than Hong Kong re-exports, possibly indicating a shift in trade patterns. U.S. citrus is now imported directly into China, but the citrus must originate from select counties in certain U.S. states. China's tariff on fresh citrus is 40 percent, but is expected to

drop to 12 percent by 2004, based on China's accession to the WTO.

Greece

Total citrus production during 2000/01 is forecast at 1.13 million tons, down 10 percent from the previous year. Orange production for 2000/01 is forecast at 900,000 tons, which is higher than average, but still lower than last year's record crop. Tangerine production will increase again to 90,000 tons and lemon production is forecast at 140,000 tons. As a result of the lower production, citrus exports in 2000/01 are forecast at 310,000 tons, a drop of 4 percent from the previous year.

Southern Hemisphere

Forecasts for the Southern Hemisphere are unavailable at this time.

(The FAS Attache Report search engine contains reports on the Fresh Citrus industries for more than 10 countries. For information on production and trade, contact Debra A. Pumphrey at 202-720-8899. For information on marketing contact Ted Goldammer at 202-720-8498.)

1/ Forecast.

2/ In Greece, Italy, and Spain "consumption" includes fruit withdrawn from the market under the European Union price support program.

3/ Crop years refers to harvest and marketing period, which usually begins in the fall and extends to the spring. This corresponds roughly to October-June in the Northern Hemisphere and April-December in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

1/ Forecast.

2/ In Greece, Italy, and Spain "consumption" includes fruit withdrawn from the market under the European Union price support program.

3/ Crop years refers to harvest and marketing period, which usually begins in the fall and extends to the spring. This corresponds roughly to October-June in the northern Hemisphere and April-December in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

4/ Tangerine production is small and is included with oranges.

5/ Includes Temples.

6/ Includes small quantities of tangerines.

1/ Forecast.

2/ In Greece, Italy, and Spain "consumption" includes fruit withdrawn from the market under the European Union price support program.

3/ Crop years refers to harvest and marketing period, which usually begins in the fall and extends to the spring. This corresponds roughly to October-June in the Northern Hemisphere and April-December in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown. The harvest of limes usually begins earlier and often extends throughout the year.

4/ Mostly limes but some sour oranges and other varieties.

5/ Sour oranges.

6/ Summer oranges (Natsu mikan or natsu daidai, a hybrid of mandarin with sour orange or pomelo).

7/ Limes.

Orange Juice Outlook for Selected Countries

Orange juice production in the Northern Hemisphere producing countries in 2000/01 is forecast at 1.2 million tons, 65 degrees brix, down about 5 percent from the previous year's output. U.S. orange juice production is forecast to decrease about 3 percent to 1.0 million tons. U.S. exports in 2000/01 are forecast at 104,000 tons, about 4 percent ahead of the previous year's shipments.

Northern Hemisphere

United States

U.S. orange juice production in 2000/01 is forecast at 1.0 million tons, down about 3 percent from last season's output. A lower volume of oranges will be available for processing in 2000/01. The yield for all oranges going into FCOJ is projected at 1.55 gallons per box of 42.0 degrees brix concentrate. U.S. orange juice exports in 2000/01 are forecast at 104,000 tons, about 4 percent more than last year. Major U.S. customers are the European Union (EU), Canada, Japan, Korea and Mexico. In addition to Frozen, Concentrated Orange Juice (FCOJ), a key export from the United States is "Not-From-Concentrate" (NFC) juice, single strength (11.8 degrees brix), which is a higher-quality and higher-priced juice product and is rapidly increasing in importance as an export commodity. Imports of orange juice, mainly FCOJ, in 2000/01 are forecast at 255,000 tons, up 6 percent from the previous year. U.S. consumption of orange juice is expected to continue to rebound from the low level of 1998/99, which was due to reduced supplies and higher prices.

Mexico

Mexico's orange juice production for 2000/01 is forecast at 40,000 tons, down 4,000 tons from the 1999/2000 level. Production is forecast down because of low international prices and high stocks. Mexico's orange juice exports in 2000/01 are forecast at 36,800 tons, down 4,000 tons from the previous year.

Spain

Spain's orange juice production in 2000/01 is forecast at 46,800 tons, up about 3 percent from the previous year's level. In Spain, oranges are not grown specifically for juice production. Oranges for juice are primarily those that have been rejected for fresh consumption. Spain is both an importer and exporter of orange juice. During 2000/01, Spain's imports of orange juice are forecast at 27,000 tons. Orange juice exports are forecast at 52,000 tons, down about 2 percent from 1999/2000.

Japan

Japan's imports of orange juice are forecast at 100,000 tons during 2000/01, down about 2 percent from the previous year but up over 18,000 tons from the 1998/99 level. Japan's beverage manufacturers will continue to increase production of citrus juice products.

Korea, Republic of

Korea's imports of orange juice in 2000/01 are forecast at 47,000 tons, a 14-percent increase from the previous year. Brazil normally accounts for about 70 percent of the import total. Consumption of orange juice is forecast to increase as well. However, the orange juice market faces competition from new drink products.

In 2000, Cheju built a processing plant complex that can process more than 60,000 tons of citrus annually. Cheju will produce concentrate, juice, powder, liquor, chocolate, and vinegar made of citrus. Cheju is expecting that the processing plant will help its marketing and will provide a stabilizing effect on market prices.

Southern Hemisphere

Forecasts for the Southern Hemisphere are unavailable at this time.

(The FAS Attache Report search engine contains reports on the Orange Juice industries for more than 10 countries, including Italy and Australia. For information on production and trade, contact Debra A. Pumphrey at 202-720-8899. For information on marketing contact Ted Goldammer at 202-720-8498.)

Prune (Dried Plum) Situation in Selected Countries

Total prune production is estimated to reach 260,581 tons in 2000/01, up 24 percent from the previous year. The United States, the largest prune producer in the world, is estimating a large prune crop of 199,581 tons for 2000/01, while France and Chile are expecting prune production to rise to more normal levels. Total prune exports, however, are estimated to rise by only 3 percent in 2000/01, mostly as a result of flat international demand for prunes.

United States

Prune production for 2000/01 (August 2000 to July 2001) is estimated at 199,581 tons, the second largest on record and up 23 percent from the previous year. Initial forecasts by the National Agricultural Statistics Service (NASS) in June 2000 called for a smaller prune crop of 181,436 tons, but favorable weather has resulted in yields of 2.2 tons per acre compared to 1.9 tons per acre the previous year. While a large U.S. prune crop is estimated for 2000/01, high labor and energy costs may prompt California growers to leave smaller prunes in the fields, especially given the high cost of electricity needed to dry the prunes and the low price growers receive for them. Prune exports are estimated to reach 66,500 tons, up only 2 percent from the previous year. Exports may be higher if demand for prunes increases in overseas markets and if U.S. grower prices for prunes decline from last year's high price of \$809 per ton.

In 1999/2000, U.S. prune production reached 161,479 tons, most of which was in manufacturing sizes and could not be exported as consumer packs. Consequently, exports declined by 9 percent in 1999/2000. Exports to Japan, the largest consumer of U.S. prunes, declined by 19 percent in 1999/2000 to 16,046 tons. Other major markets include Germany, Italy, the United Kingdom, Canada and Hong Kong. U.S. prune exports to Hong Kong increased by 216 percent to reach 2,328 tons. It is estimated that 70 percent of prune exports to Hong Kong are transported to mainland China. Prune imports for 2000/01 are expected to remain unchanged from 1999/2000.

France

Prune production in 2000/01 (September 2000 to August 2001) is estimated up 41 percent to 41,000 tons, from the abnormally small 1999/2000 crop. Although production is expected to increase significantly in 2000/01, it is still likely to be below the 52,000-55,000 ton potential. France is the world's second largest prune producer after the United States.

French prune exports in 2000/01 are expected to reach 18,000 tons, up 18 percent from last year, as a result of the larger crop. The small 1999/2000 prune crop led to a 27-percent decline in prune exports last year to 15,255 tons. Despite the decline in exports last year, prune stocks declined from 23,200 tons in August 1999 to 12,000 tons in August 2000.

Chile

Prune production in 2000/01 (January 2000 to December 2000) is estimated at 20,000 tons, up 5 percent from the previous year. Industry sources have indicated that good economic results obtained by most producers during the last few years have encouraged many farmers to plant additional orchards or replace older, low producing trees.

Chile's prune exports are estimated to reach 19,000 tons in 2000/01, down 5 percent from the previous year. Chile's prunes are ready for shipment from the end of April through November. Major markets for Chile's prunes in 1999/2000 included Mexico, Brazil, Spain, Germany and Peru.

(The FAS Attache Report search engine contains reports on the Dried Fruit industries for 8 countries, including South Africa, Turkey and Australia. For information on production and trade, contact Karina Ramos at 202-720-6877. For information on marketing contact Kelly Strzelecki at 202-690-1341)

Processed Tomato Products Situation and Outlook in Selected Countries

Production of tomatoes for processing in 11 major producing countries in 2000 is estimated at 22.1 million tons, down 9 percent from the record output in 1999, due mostly to surplus supplies. The mostly notable declines of 21 percent, 17 percent, and 8 percent were registered in the United States, Turkey, and Western Mediterranean countries, respectively (Spain accounted for the region's largest decline). Production of tomato paste in selected countries, excluding the United States, in 2000/01 is estimated at 1.47 million tons, down 2 percent from last year's record level, due mainly to surplus supplies and low international prices. Production of canned tomato products in selected countries in 2000/01 is estimated at 2.2 million tons, down 4 percent from the previous year's record, due mostly to a decline in the Italian output. During this same period, exports of tomato paste pack from selected countries are estimated at 1 million tons, up 13 percent from the previous year, due mainly to larger shipments from Italy, Portugal and Greece. Exports of canned tomato pack from selected countries are estimated at 1 million tons, up 13 percent from 1999/2000.

In the **United States**, production of tomatoes for processing under contract in 2000 is estimated at 9.3 million tons compared with 9.6 million tons forecast earlier, down 18 percent from the record crop in 1999. The decline in output was due mostly to industry seeking to reduce the large carryover stocks and to improve low wholesale prices caused by the closing of Tri-Valley Growers (one of the largest processors of canned tomatoes in the United States). The bulk of U.S. tomatoes for processing goes for tomato paste production.

During the first 11 months of 2000, U.S. exports of tomato products (canned tomatoes, tomato paste, ketchup and tomato sauce) totaled 249,000 tons valued at \$196 million, down 1 percent in volume but up 4 percent in value, from the same period in 1999. Canada remained the number one U.S. customer for tomato paste, sauce and canned tomatoes, while Mexico was the top market for ketchup. U.S. imports of processed tomato products (canned tomatoes, ketchup, tomato paste and sauce) during the same period totaled only 84,000 tons valued at \$81 million, down 49 percent in volume and 43 percent in value, due mostly to a sizable drop in tomato paste imports from Italy.

In **Mexico**, production of tomatoes for processing in 2000 is estimated at 210,000 tons, down from 240,000 tons forecast earlier, and down 3 percent from the revised volume in 1999. This decline was due mainly to lower area planted caused by surplus supplies and lower export prices from the previous year's output. Tomato paste production in Mexico in 2000 is estimated at 28,500 tons

compared with 36,000 tons forecast earlier, down 44 percent from 1999, due to low international prices. Tomato paste production for 2001 is forecast at 31,500 tons, up 11 percent from last year.

In **Brazil**, the production of tomatoes for processing in 2000 is estimated at 1.2 million tons, up from 1.0 million tons forecast earlier, due mostly to higher yielding varieties and few problems with pests. About 70-75 percent of Brazilian production of tomatoes for processing goes into paste and puree, and the remainder into sauces. Output of paste in 2000 is estimated at 110,000 tons, unchanged from an earlier forecast, but down 19 percent from 1999, due to lower yields caused by disease and pest problems. Because of the high costs associated with combating disease and the white fly pest in the Bahia Region, some producers have begun to shift area from tomatoes into the production of bananas, grapes, mangoes, guavas and other more profitable crops.

In **Chile**, production of tomatoes for processing in 2000 is estimated at 925,000 tons, down from 975,000 tons reported earlier, and 3 percent from 1999. This decline was due to unfavorable weather conditions during the harvesting season. The bulk of Chile's tomatoes for processing goes into tomato paste pack, with the remainder slated for canned and tomato sauce production. Output of tomato paste in 2000 is estimated at 115,000 tons, down 7 percent from 1999, due to reduced area. Chile's canned tomato production includes whole peeled, crushed peeled and diced tomatoes.

Mediterranean Area

Production of tomatoes for processing in 2000 in the major producing countries in the European Union (EU) is estimated at 8.5 million tons, down 9 percent from 1999.

In **France**, production of tomatoes for processing in 2000 has been revised to 370,000 tons from 330,000 tons, down 1 percent from 1999, due mostly to lower planted area. During the same period, the production of tomatoes for paste was revised to 44,500 tons from 43,000 tons, down 7 percent from 1999. French production of canned tomatoes in 2000 was also revised to 17,000 tons from 21,000 tons forecast earlier, down 21 percent from 1999. The downward revisions in paste and canned output were due largely to a decline in fruit delivered to processors. France remains a net importer of both canned tomatoes and tomato paste.

In **Turkey**, production of tomatoes for processing in 2000 is estimated at 1.7 million tons, down 17 percent from 1999, due mostly to reduced area. Nearly all of Turkey's industrial tomato output goes into paste production. Production of tomato paste in 2000 is estimated at 260,000 tons, down 19 percent from 1999. After last year's increased world production of tomato paste accompanied by lower international prices, some local processors have reportedly not been able to pay farmers for last year's crop. As a result, some producers have switched area from tomatoes to other cash crops, i.e., corn, vegetables and wheat, for a better return on their investment. Turkish tomato paste exporters are said to have lowered their prices from \$650 per ton in 1999 to \$600 per ton in 2000. China, with its low priced tomato paste, is reported to be a strong competitor to Turkish exports in

the Asian markets. Japan, Saudi Arabia, Russia, Italy, Malaysia, and Korea were Turkey's leading markets in 1999.

In **Greece**, production of tomatoes for processing in 2000 is estimated at 1.2 million tons, down from 1.3 million tons forecast earlier, and down 8 percent from the previous year. Approximately 90 percent of the industrial tomato production is slated for production of tomato paste, passata and juice. Output of tomato paste in 2000 has been revised to 184,500 tons, down from 209,000 tons forecast earlier, due mainly to a decline in fruit delivered to processors. The quality of last year's tomatoes varied from good to average. During the same period, production of canned tomatoes is estimated at 31,400 tons, up slightly from the previous year, reflecting an increase in canned pack stocks.

In **Spain**, production of tomatoes for processing in 2000 is estimated at 1.4 million tons, down from 1.7 million tons forecast earlier, and down 18 percent from 1999. The decline was due mainly to unfavorable weather conditions during the planting season and a lower crop area. During this same period, estimated output of canned tomatoes was revised to 213,000 tons from 229,000 tons, due mostly to fewer deliveries of fruit to processors. Production of tomato paste has also been lowered to 170,000 tons from 184,000 tons reported earlier, due to fewer deliveries of fruit to processors.

In **Italy**, production of tomatoes for processing in 2000 is estimated at 4.7 million tons, down 4 percent from 1999, due mainly to a reduction in planted area in response to larger stocks and low prices of canned and paste packs. Production of canned tomatoes is estimated at 880,000 tons, up 9 percent from 1999, due to increased deliveries to processors and larger projected exports. Production of tomato paste in Italy in 2000 is estimated at 340,000 tons, down 8 percent from 1999, due to over-supply and low international prices. In 2000, exports accounted for 97 percent of Italy's total paste pack.

In **Portugal**, production of tomatoes for processing in 2000 is estimated at 885,000 tons, down 12 percent from 1999, due mostly to heavy rains in April and May, followed by a period of very dry weather during the growing season. Output of processing tomatoes in Portugal consists mainly of tomato paste. Tomato paste production in Portugal in 2000 is estimated at 156,000 tons, down 8 percent from 1999, due to fewer deliveries to processors, caused by adverse weather conditions. Portugal exports the bulk of its tomato paste pack.

In **Israel**, production of tomatoes for processing in 2000 is estimated at 260,000 tons, down 3 percent from 1999, due mainly to reduced area caused by dry conditions. Production of tomato paste is estimated at 28,000 tons, down 23 percent from 1999. Production of canned tomatoes in Israel in 2000 is estimated at 21,000 tons, down 15 percent from the previous year, because of fewer deliveries to processors. The existence of surplus supplies of tomato products in the international market led processors to contract for fewer tomatoes in 2000. Israel exports the bulk of its canned tomatoes and tomato paste output.

(The FAS Attache Report search engine contains reports on Tomatoes and Tomato Products industries for more than 10 countries, including the United states, Italy, France and Chile. For information on production and trade, contact Emanuel McNeil at 202-720-2083. For information on marketing contact Elizabeth Mello at 202-720-9903.)

World Trade Situation and Policy Updates

India Plans to Tap \$13 Billion Global Organic Food Market

India has launched a National Program for Organic Production [NPOP] to realize the vast potential in organic agriculture with an eye on the \$13 billion global market for organic food and beverages [OFB]. There is an increased emphasis on sanitary and phytosanitary measures under WTO regime, so the Indian government has launched an NPOP and established a national steering committee to monitor it. They said the committee would link producers to the export markets, enhance market access and price premiums and assist resource poor farmers with little access to external resources. With heightened awareness on health and environmental issues in developed nations, retail sales of OFB worldwide were projected to grow at 5 to 10 percent in the next 5 years. NPOP intended to tap India's inherent advantage in the sphere due to a strong tradition of organic farming by further restricting use of chemical inputs. NPOP would target, among others, the United States and Germany, the world's two largest markets for OFB, with a volume of 4.2 billion and 1.2 billion, respectively.

Chile Approves Imports of Apples and Pears from all Counties in Washington State

Chile recently agreed to allow imports of apples and pears from the entire state of Washington. Prior to this decision, Chile banned entry of U.S. pears and only allowed apple imports from 26 counties in California and 11 counties in Washington. This new market opportunity is expected to result in combined Washington apple and pear sales of \$200,000 to \$500,000, annually. In marketing year (MY) 1997/98, U.S. apple exports to Chile reached a record 196 metric tons, valued at \$102,000. In MY 1999/00, the volume and value of U.S. apple shipments to Chile dropped to 129 tons, valued at \$49,394, partly due to last year's lower Washington state apple crop. Other factors affecting apple sales to Chile last season included a stronger U.S. dollar vis-a-vis the Chilean peso and higher U.S. prices.

Taiwan Unveils New Plant Quarantine Requirements

Taiwan has announced that shipments of most fresh fruits and vegetables that arrive on or after March 7, 2001, will have to comply with new plant quarantine requirements. While the specifics of the new policy are being thoroughly reviewed by industry groups and APHIS, the initial assessment is that the new requirements will not adversely affect U.S. shipments of the affected products to Taiwan. Reportedly, the only change from the previous requirements is a new declaration for Western Flower Thrips (*Frankliniella Occidentalis* (Pergande)). The additional declaration (AD) on the phytosanitary certificate must state that the product has been thoroughly inspected and found free of the pest, or has been properly fumigated prior to shipment. Taiwan is

a very important market for U.S. fresh produce. In fiscal year 1999/2000, Taiwan was the fourth largest market for U.S. fresh fruits and vegetables, with combined shipments valued at more than \$185 million.

FDA Publishes Final Rule to Increase Safety of Fruit and Vegetable Juices

The Food and Drug Administration announced a final rule designed to improve the safety of fruit and vegetable juice and juice products. Under the rule, juice processors must use Hazard Analysis and Critical Control Point (HACCP) principles for juice processing. HACCP systems call for a science-based analysis of potential hazards, determination of where the hazards can occur in processing, implementing control measures at points where hazards can occur to prevent problems, and rapid corrective actions if a problem occurs. Firms will be required to maintain records in association with implementation of their HACCP plans and verification of those plans. HACCP systems are already federally required for seafood, meat processors and poultry processors. Implementation of a HACCP system will increase the protection of consumers from illness-causing microbes and other hazards in juices. FDA estimates that there are between 16,000 to 48,000 cases of juice-related illnesses each year. It is estimated that the action taken due to the rule will prevent at least 6,000 illnesses per year. More information is available on the Internet at <http://www.fda.gov/bbs/topics/answers/2001/ANS01068.html>

Canada Imposes Anti-Dumping Duties on Asian Garlic

U.S. fresh garlic exports to Canada are expected to be more competitive following Canada's imposition of year-round duties on Asian garlic. On January 2, 2001, the Canada Customs and Revenue Agency made a preliminary determination of dumping and applied provisional duties on Chinese and Vietnamese garlic. The Canadian International Trade Tribunal has initiated an inquiry to determine whether the dumping of garlic from the China and Vietnam has caused or is threatening to cause injury to Canadian garlic producers. Canada has applied anti-dumping duties on Chinese garlic since 1997, but only on garlic imported between July and December each year. Canadian growers lobbied the government for year-round duties after import levels of Asian garlic increased sharply during the non-duty period. While the United States captures slightly more than 20 percent of the Canadian import market for fresh garlic, China captures more than half. Canadian imports of fresh garlic from the United States during 1999 were 2,417 tons, valued at \$ 3.4 million.

Japanese Imports of Chinese Broccoli Rise Rapidly

Japanese imports of fresh Chinese broccoli continue to grow, with shipments in 2000 estimated at 9,000 tons, up from 2,300 tons in 1999. Most sales occurred in the late fall and winter months, when U.S. broccoli prices are comparatively high. With low production costs and good quality on Chinese

product, U.S. broccoli shippers will continue to face increasing competition from China in the late fall and winter months, the peak period for Chinese production. Overall, 2000 imports from the United States are estimated at just under 70,000 tons, down from 87,603 tons in 1999.

FDA Announces New Procedures on Safety of Imported Foods

FDA announced the enactment of procedures to advance the government's food safety program by more effectively preventing unsafe imported food from entering the United States. FDA will now require that shipments from "bad actor" importers be held in a secure storage facility at the importers' expense until released by FDA. FDA has also established procedures to enhance interagency coordination and efficiently use Customs' civil monetary penalties procedures against importers who attempt to enter food into the United States by means of a material false statement, act, or omission. Penalties may be issued in amounts up to the domestic value of merchandise so imported. FDA has also published, for comment, a proposed rule that will require marking food shipments refused for safety reasons to indicate that the product was denied entry into the United States. This will help eliminate the practice of "port shopping" in which importers whose cargo is denied entry at one port try to re-introduce it at another port without bringing the food into compliance with U.S. laws and regulations. These procedures have been developed to address six specific issues, targeting unscrupulous importers who violate the rules and subvert the system by moving unsafe food into U.S. markets. More information is available on the Internet at <http://www.fda.gov/bbs/topics/NEWS/2001/NEW00749.html>

USDA Proposes to Amend Import Regulations on Mangoes from the Philippines

The U.S. Department of Agriculture announced on January 19, 2001, that it is proposing to amend its regulations regarding the import of mangoes from Guimaras Island in the Republic of the Philippines. USDA would allow imports of mangoes grown on Guimaras Island because this area is free of the mango seed weevil, a pest the United States does not have. However, because Guimaras Island has not been found to be free of fruit flies, the mangoes must be treated with vapor heat prior to importation under the supervision of an APHIS inspector. In addition, each shipment of mangoes must be accompanied by a phytosanitary certificate stating that the mangoes were grown on Guimaras Island and that the fruit has been treated with vapor heat in accordance with the Plant Protection and Quarantine Treatment Manual. For more information, contact Paul Gadh, import specialist, phytosanitary issues management team, PPQ, APHIS, 4700 River Road, Unit 140, Riverdale, Md. 20737, (301) 734-6799. Notice of this action was published in the January 22, 2001, Federal Register and is available on the Internet at <http://www.aphis.usda.gov/ppd/rad/webrepor.html>

USDA Establishes Quarantine for West Indian Fruit Fly in Texas

The U.S. Department of Agriculture has quarantined part of Cameron County, Texas, and restricted the interstate movement of regulated articles from that area after the West Indian fruit fly was detected in an abandoned guava grove. Cameron County is located in the southern-most tip of Texas near the Mexican border. The West Indian fruit fly is a very destructive pest of fruits and vegetables, including carambola, grapefruit, guava, limes, mangoes, oranges, passion fruit, peaches, and pears. The pest can cause serious economic losses by lowering the yield and quality of these fruits and vegetables and, in some cases, by damaging seedlings and young plants. Heavy infestations can result in complete loss of crops. For more information, contact Robert G. Spaide, assistant director, invasive species and pest management, PPQ, APHIS, 4700 River Road, Unit 134, Riverdale, Md. 20737, (301) 734-8247. Notice of this action was published in the January 22, 2001 Federal Register and is available on the Internet at <http://www.aphis.usda.gov/ppd/rad/webrepor.html>

China Goes Nutty for California Almonds

California almond exports to China last year reached record levels in marketing year 2000, with exports totaling over 11,000 tons, up over 200 percent from the previous year. China is now the fifth largest market (a big jump from 12th last year) for U.S. almonds, following Germany, Spain, Japan, and India. Much of this success can be attributed to the Market Access Program funded efforts of the Almond Board of California, who used MAP funds to introduce in-shell almonds, a product line the Chinese prefer. A successful public relations and media campaign teaching consumers about the versatility and healthfulness of almonds helped drive this doubling of sales in China. The Almond Board of California believes that China has potential to be one of the top 3 export destinations in the next 5 years.

Organic Updates

Organic Export Opportunities Report Available On-line

A recent report completed by the Horticultural and Tropical Products Division of FAS for the Washington Horticultural Association's Annual Meeting and Trade Show, December 6, 2000, is now available on our web site: <http://www.fas.usda.gov/http/organics/speech.htm> The report touches on world organic demand and production in the leading countries that purchase and produce organic commodities. The report focuses on the countries that show the most promise for U.S. organic produce and those countries that are competing suppliers.

Greek Organic Production is Limited, But Growing Rapidly

According to the Ministry of Agriculture the total acreage devoted to organic crops in Greece, is estimated at 22,000 hectares, compared to only 1,200 hectares in 1994 (total arable area of Greece: 4,000,000 Ha). The organic crop acreage in Greece is the smallest in the EU, but is increasing significantly from year to year. Grapes, olives, and citrus are the main organic crops. Salad vegetables are also growing in suburban small fields. Prices for organically produced fruits and vegetables fluctuate at levels 25-35 percent higher than similar non-organic products.

Argentina Ranks Among Largest Producers of Organic Apples and Pears

Argentina is one of the world's largest producers of certified organic apples and pears, with 380 and 234 hectares planted in 1999, respectively, in comparison with 188 hectares planted to apples and 156 to pears in 1998. While no data is available on the area planted in 2000, it is expected that the total area planted to organic fruits will continue its aggressive growth.

Total production of certified organic apples and pears in Argentina in 1999 reached approximately 8,000 tons and 6,000 tons, respectively. Production is expected to continue to grow at a similar pace in the near future, driven by rapidly increasing demand from the United States and the European Union (EU), where consumption of organic products has been increasing significantly in the last few years.

Argentine exports of organic fruits increased 33 percent in 1999, compared to 1998. Argentine exports of organic fruits to the EU in 1999 totaled 6,100 tons, accounting for 28 percent of Argentina's organic exports to the EU. Organic fruits are among the leading organic products exported to the European Union, after grains and oilseeds. Apples accounted for 48 percent of total organic fruit exports, followed by pears with 40 percent. Exports of organic fruits to the United States in 1999 reached 1,850 tons, of which pears accounted for 1,450 tons (78 percent) and apples, the balance.

For more news on organics, see HTP's monthly newsletter "Organic Perspectives," available at the HTP home page: www.fas.usda.gov/http/organics/organics.html The newsletter contains reports on organics from around the world gleaned from attache reports, trips made by HTP's organics staff, and other sources. The newsletter also covers items of interest about the U.S. national organic program and the domestic organic industry. A list of upcoming conferences, trade shows and other events is included in every issue.

Export News and Opportunities

Horticultural exporters, do not overlook the billions of dollars available to help facilitate sales to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without credit guarantees. Invest the time to learn more about the Export Credit Guarantee Program (GSM-102) and Supplier Credit Guarantee Program (SCGP) to increase your sales and lower your risks. Under the FY 2001 GSM-102 and SCGP, USDA has authorized \$4.3 billion in credit guarantees to help facilitate sales to over 60 developing countries, Japan, China, Hong Kong and Taiwan. As of January 12, horticultural exporters have registered \$1.2 million in fresh fruit, tree nut and wine sales under Supplier Credit. Use GSM and SCGP to avoid possible importer and importer's bank defaults on payments and ensure that American farm and food products continue to move to markets around the world. USDA does not provide financing, but it guarantees payments due to U.S. exporters in case the foreign banks or importers default.

You may learn more about GSM-102 and SCGP regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity on the Internet at:

<http://www.fas.usda.gov/export.html>

GSM-102

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report. If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amounts due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

Supplier Credit Guarantee Program

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

GSM-102 and SCGP

The following tables present the FY 2001 GSM-102 and SCCP for which USDA has allocated credit guarantees for sales of U.S. horticultural products. For most countries and regions, exporters may apply for credit guarantees on a first-come-first-served basis to cover sales of any of the eligible commodities published in FAS program announcement PR 0002-01, issued January 10, 2001 or as superseded. The following horticultural products are eligible under the export credit guarantee programs: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. The General Sales Manager will consider requests to establish an SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products that are currently not eligible.

(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim on 202-720-0911).

Think outside the borders.

Ever felt like you were trapped inside a cookie cutter, with all your competitors chasing the same customers?

Well, **96 percent of the world lives outside our borders** and, with a little effort and a little help, you can reach them.

USDA's Ag Export Services can put your message on line and in newsletters, translated into dozens of languages and in front of **buyers in 75 countries for \$15**. And that's just for starters.

*To learn how you can sell your food or fiber products outside our borders, contact **USDA's Ag Export Services**.*

FOREIGN AGRICULTURAL SERVICE PUBLICATIONS

The publications listed below present timely and reliable information on U.S. and world production, supply and demand, and trade for many different commodities. All these publications can be subscribed to through the National Technical Information Service (NTIS) of the U.S. Department of Commerce. To order, call NTIS at 1-800-363-2068, (703) 605-6060, or (703) 487-4639 for TDD (hearing impaired only). A subscription form is provided on the reverse side.

Tropical Products: World Markets and Trade

Issued four times a year. Provides information on the world production and supply and demand situation for coffee and tea. Presents U.S. trade data on spices and essential oils.

Cotton: World Markets and Trade

Monthly report provides statistics and other information on U.S. and world production, supply and demand, and trade for cotton. Covers crop conditions, the latest trade policy developments, and export market information.

Dairy Monthly Imports

Monthly report of imports of cheese and other quota dairy products subject to licensing, as well as imports under the quota not subject to licensing.

Livestock and Poultry: World Markets and Trade

Semi-annual publication provides information on U.S. and world production, use and trade of livestock and poultry products, trade policy developments, and export market information.

Grain: World Markets and Trade

Monthly publication provides information on U.S. and world production, supply and demand, and trade for a variety of grains. Covers crop estimates, the latest trade policy developments, and export market information.

World Horticultural Trade and U.S. Export Opportunities

Monthly publication provides information on the world situation and outlook for horticultural products. Covers export competition, foreign market import potential, and export opportunities for U.S. horticultural products.

Oilseeds: World Markets and Trade

Monthly publication provides data and analyses on U.S. and world production, supply, use, and trade of a variety of oilseeds and products. Covers production estimates, latest trade policy, commodity prices, and export market information.

Sugar: World Markets and Trade

Semi-annual publication provides information on the world production and supply and demand situation for sugar. Includes in-depth special country features.

Tobacco: World Markets and Trade

Quarterly report provides information on U.S. and world production, supply and demand, and trade for tobacco. Covers crop estimates, the latest trade policy developments, and export market information. The March issue contains complete U.S. tobacco trade data for the preceding calendar year.

World Agricultural Production

Monthly report provides information on U.S. and world production of major agricultural products, including crop, weather and production briefs, and special articles of interest to the trade.

Wood Products:

International Trade and Foreign Markets

Issued five times a year. Provides information on the production, trade, and supply and demand situation in countries around the world for wood products. Highlights the latest trade policy developments, export statistics, and market information of interest to U.S. exporters.

Monthly Summary of Export

Credit Guarantee Program Activity

Monthly summary report shows fiscal year commitment figures for the Commodity Credit Corporation's Export Credit Guarantee Program (GSM-102) and Intermediate Credit Guarantee Program (GSM-103).

U.S. Export Sales

Weekly report based on reports submitted by private exporters. Outstanding export sales as reported and compiled with other data give a snapshot view of the current contracting scene. All countries with outstanding sales or accumulated exports are included for each class of wheat, all wheat, wheat products, corn, soybeans, soybean cake and meal, American pima cotton, all upland cotton, whole cattle hides, and wet blues.

AgExporter Magazine

Monthly magazine for businesses selling farm products overseas provides tips on exporting, descriptions of markets with the greatest sales potential, and information on export assistance available from the U.S. Department of Agriculture. The audience is U.S. agricultural producers, exporters, trade organizations, state departments of agriculture, and any other export-oriented organization.

Dairy: World Markets and Trade

Semi-annual publication provides information on U.S. and world production, use and trade of dairy products, trade policy developments, and export market information.

Food and Agriculture Directory

Directory features up-to-date listings of federal and state agencies, trade associations and a host of other organizations that can help you penetrate foreign markets. Includes phone and fax numbers.

A Guide to Exporting: Solid Wood Products

Helps U.S. wood products producers begin examining and preparing for export markets by providing a brief overview of the necessary steps in developing a successful export marketing strategy.

Dictionary of International Agricultural Trade

This handbook provides a quick reference of terms and concepts pertaining to international agricultural trade.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail kaup@fas.usda.gov

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, sexual orientation, or marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 1400 Independence Avenue, SW, Washington, DC 20250-9410 or call (202) 720-5964 (voice and TDD). USDA is an equal opportunity provider and employer."
